

ABSTRACT

Brief description of the non-english documents cited in the International Search Report and in the French Search Report

DE19835759 describes a fuel cell comprising first and second stacking of an electrode, a membrane and an electrode. A first channel, a separator and a second channel are arranged between the first and second stacking. In order to obtain fluid circulation with turbulences, the separator is non-plane or it comprises, on each face thereof, some studs.

FR2814857 is cited and analysed in the specification of the PCT/FR2004/001525 application (page 2, l11-20).
